

“How-to” Assignment

With the computers you have in Lab 2, *as a group*, you must write a “How-to” guide for installing:

MAME
Donkey Kong and the
printer using the IP address

onto your Ubuntu* operating computer. This must be in your own words and easy to understand – a guide for the technologically challenged.

You must also include a **screenshot** of *each* group member achieving **10 000 points** on Donkey Kong**.

This must be typed and printed from your Ubuntu* computer.

Due Friday, September 18th

5% will be docked for each day that the assignment is not turned in after the due date.

Professionalism counts. If you have not included your names, use proper grammar and spelling and the assignment is not neat and organized – you *will* lose marks.

* You should be using Ubuntu unless previously permitted to use another operating system by Ms. Legh & Mr. Makkreel

** Please explain how to install Donkey Kong, however, if you prefer to get 10 000 on Pac Man instead – that is acceptable.
